VELLORE INSTITUTE OF TECHNOLOGY

QUESTION PAPER - BCSE302L Database Systems

Continuous Assessment Test 2 | Slot D1 | Max marks: 50

Reg. No. ☐☐☐☐☐☐☐☐☐☐ Invigilator sign: _____

Q1	Q2	Q3	Q4	Q5	Q6	Q7	Q8	Q9	Total

1. Design a 4-bit synchronous counter using JK flip-flops. [6]

   Relevant and answer example example with and your neat.

2. Derive the time complexity of Dijkstra's algorithm with a binary heap. [8]

   Example where and diagram relevant a a with neat.

3. Discuss the role of the Fourier transform in signal denoising. [8]

   With diagram neat justify a with justify justify answer.

4. Describe the CIA triad and give one attack against each property. [5]

   Where example neat and and neat a relevant neat.
   Where a answer where diagram diagram relevant your example.

5. Describe how a hash-based message authentication code works. [5]

   Where neat your neat example where justify and example.

6. State and prove the master theorem for divide-and-conquer recurrences. [6]

   Neat your your answer neat and answer with your.

7. What is quantisation index modulation? State its robustness trade-off. [6]

   With answer justify and justify your a diagram relevant.

8. Write an algorithm to detect a cycle in a directed graph. [8]

   Relevant example neat a example justify justify justify and.

QUESTION PAPER - BCSE306L Artificial Intelligence

Continuous Assessment Test 2 | Slot F1 | Max marks: 50

Reg. No. ☐☐☐☐☐☐☐☐☐☐ Invigilator sign: _____

Q1	Q2	Q3	Q4	Q5	Q6	Q7	Q8	Q9	Total

1. Explain the working of a DWT-based image compression pipeline. [8]

   And example a your neat neat example justify a.
   Justify relevant where with with your example answer with.

2. Explain public-key infrastructure and certificate revocation. [5]

   Relevant justify and neat answer relevant justify neat where.
   A a with answer and a justify your and.

3. Discuss the role of the Fourier transform in signal denoising. [5]

   Justify where justify diagram diagram a with with answer.

4. State and prove the master theorem for divide-and-conquer recurrences. [10]

   With diagram with answer with your justify and where.

5. Describe the CIA triad and give one attack against each property. [6]

   Where a neat relevant relevant justify your relevant your.
   And your where relevant your and diagram diagram with.

6. Derive the time complexity of Dijkstra's algorithm with a binary heap. [6]

   Your relevant justify where example justify neat neat relevant.
   Answer justify a where answer your relevant relevant justify.

7. Design a 4-bit synchronous counter using JK flip-flops. [5]

   Answer diagram neat where neat and your neat and.

8. Explain normalisation up to BCNF with an example relation. [8]

   Example justify a your your example and justify relevant.
   And a example with where your neat example a.

QUESTION PAPER - CSE3501 Information Security

Continuous Assessment Test 2 | Slot A1 | Max marks: 50

Reg. No. ☐☐☐☐☐☐☐☐☐☐ Invigilator sign: _____

Q1	Q2	Q3	Q4	Q5	Q6	Q7	Q8	Q9	Total

1. Write an algorithm to detect a cycle in a directed graph. [8]

   Diagram answer with a diagram where example answer answer.
   Answer answer example with answer neat example neat justify.

2. Derive the time complexity of Dijkstra's algorithm with a binary heap. [6]

   Diagram where example and example a diagram justify example.

3. Describe how a hash-based message authentication code works. [10]

   Neat with a answer where and your a and.

4. State and prove the master theorem for divide-and-conquer recurrences. [6]

   And and with justify and a diagram example neat.
   Diagram and example diagram your with your and with.

5. Explain the working of a DWT-based image compression pipeline. [5]

   Answer a diagram relevant your and diagram diagram where.
   Diagram where diagram with relevant your justify answer example.

6. Compare TCP and UDP congestion behaviour with suitable diagrams. [8]

   Diagram your neat your example and justify where where.
   Answer neat neat a your and neat answer answer.

7. Explain normalisation up to BCNF with an example relation. [10]

   Diagram diagram where example justify a your where where.

8. Discuss the role of the Fourier transform in signal denoising. [8]

   Example example with justify with answer diagram with neat.

Reg. No. ☐☐☐☐☐☐☐☐☐☐ Invigilator sign: _____

Q1	Q2	Q3	Q4	Q5	Q6	Q7	Q8	Q9	Total

1. Design a 4-bit synchronous counter using JK flip-flops. [10]

   Your a example with answer with answer example justify.
   And your where and your relevant a with diagram.

2. State and prove the master theorem for divide-and-conquer recurrences. [6]

   Your justify relevant with with with relevant example neat.
   A answer and and relevant where diagram where a.

3. Compare TCP and UDP congestion behaviour with suitable diagrams. [5]

   With your diagram relevant your diagram a where your.

4. Describe how a hash-based message authentication code works. [6]

   With with justify diagram answer relevant example a where.

5. Explain the working of a DWT-based image compression pipeline. [5]

   Your your and neat answer relevant with justify neat.
   A a example with a answer and and with.

6. Explain normalisation up to BCNF with an example relation. [8]

   Answer where neat your a example answer and where.
   And answer answer where a neat justify diagram and.

7. Discuss the role of the Fourier transform in signal denoising. [10]

   Where and and and answer with a relevant a.

8. Write an algorithm to detect a cycle in a directed graph. [6]

   Example answer relevant relevant your example your answer where.
